

FLOW MAP

Sequencing

The Flow Map is used for:

- Sequencing the stages and sub-stages of an event
- Identifying the steps in a process
- Ordering information

Constructing a Flow Map

The Flow Map is used by students for sequencing and ordering information. Above the first stage write the name of the event or sequence. In the larger rectangles - flowing from left to right - write in the major stages of the event. In the smaller rectangles below, write the sub-stages of each major stage.

Name
the
Event
